

# SNOWSOUND®

Acoustic Technology & Design

*"We specified Snowsound Flap panels to add movement and color to the Sales workstation area, as well as to prevent echoes from Salespersons' frequent phone calls. The product was discovered by us on the cover of Architectural Products Magazine. We think it looks great and brings a little bit of personality to the space! It's also visible from the hallway that leads from the Elevator lobby to the executive private offices, so just about everyone who visits is greeted by the display."*

Suchita K Shah | KSD Architects

Project Name: Company Confidential

Location: Piscataway, New Jersey

Application: Open Workspace

Product: FLAP

## PROJECT BACKGROUND:

118,000+ s.f. Renovation; Laboratory, Offices & Pilot Plant for a Pharma Company. Parts of the existing CMU and steel structure, sealed with a combination of CMU and insulated metal panels at the exterior, were demolished and/or covered to accommodate the new aesthetics and functions required by the pharmaceutical company. The second floor of this building – formally a dark, cavernous, ink-stained space – was transformed into open and private offices for the Pharma company's USA Sales, Human Resources and Executive departments. With the use of large new skylights, a new 35-foot aluminum and glass curtain wall system, modern furniture finishes and accessories, the space was given a new life. In the end, a heavily used warehouse building was transformed into a US corporate headquarters for a successful India-based pharmaceutical company.
