

The Sound of Well-Being, Engagement and Productivity

Earn CEU credits at our educational event.

The late Steve Jobs famously observed that “Design is not just what it looks like and feels like. Design is how it works.” His insight into the importance of both form and function is what has kept Apple at the forefront of the tech industry, and the same can be said for the world of interiors.

Snowsound, in partnership with Interiors + Sources, has developed an exciting, informative one hour CEU course on acoustics playing a vital role in the design of healthy, functional environments. This program is registered for 1 hour (0.1) CEU value (HSW credit). The IDCEC class code is 110531.

This CEU course is jam-packed. You will learn to:

- Explain how noisy environments negatively impact their occupants.
- Define the ABCs of acoustic properties as they relate to interiors.
- Identify the emotional and psychological impacts of sound on people’s wellbeing.
- Describe the difference between engagement and productivity.
- Differentiate between NRC and STC ratings as related to acoustic materials.

Contact your Snowsound Representative to host this event today.

Designers will get the credit they need, and the knowledge to make them more successful in meeting customer needs. We’ll take care of all the details.
