# FULCRO SOUND ABSORBING COFFEE TABLE

### DESIGNER Claudio Bellini

Coffee tables available in a variety of sizes and finishes. The base features Snowsound sound-absorbing technologies.

### FULCRO ACOUSTIC COFFEE TABLES

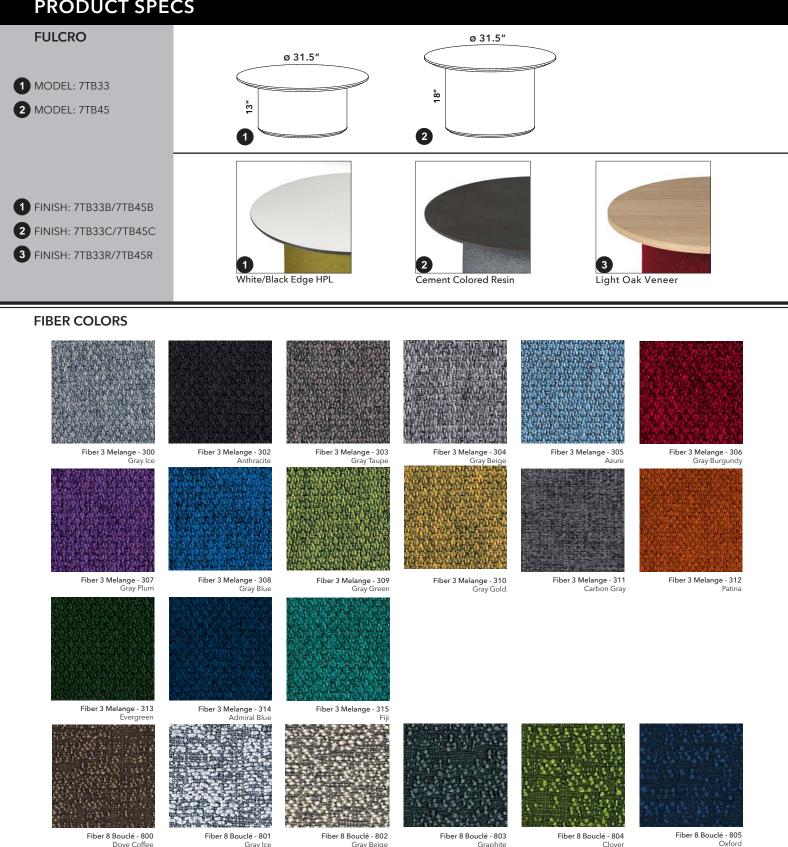

Coffee tables are crafted with a steel and wooden supporting structure, covered with sound-absorbing polyurethane and polyester. This combination, along with the Snowsound Fiber sound-absorbing fabric covering made of polyester fibers, enables the elements to effectively absorb various frequencies.

The internal supporting structure consists of a robust steel base painted with epoxy powders. It is equipped with three holes for three screws to secure the central column, which is made of tubular steel also painted with epoxy powders. The circular under-top plate, made of epoxy powder-coated steel, is fixed to this column using M8 screws. The table tops are attached to the plate with 6 galvanized M6 screws.

Each element is furnished with 4 technopolymer feet. The table tops are available in 12 mm thick "HPL" laminate, featuring a white exterior and a black interior with a tapered perimeter edge. Alternatively, they can be crafted from MDF wood and covered with oak wood essence or colored cement resin. The tops are protected with a transparent water-based resin. The handcrafted nature of the workmanship ensures that each piece is unique and exclusive.
